SKILL® The World's Best Surgical Instruments

All **SKILL®** Instruments are manufactured on a three-pillar principle, namely raw material quality, skilled craftsmanship as well as precise and validated heat treatment and tempering.

Our goal is achieved by using German Forgings and German Steel for the production of our **SKILL®** Instruments. Using only German Craftsmanship, engineering and know-how throughout the manufacturing process along with the validated heat treatment is a necessity in the production of our **SKILL®** Instruments.

SKILL® Instruments are manufactured in Germany according to the EU Directive 93/42/EWG, as well as the following ISO Standards;

ISO: 9001
ISO:13458
ISO: 7153-1

No compromise is made on the quality of a **SKILL®** Surgical Instrument.

The **SKILL®** short chain of supply allows clients to purchase the highest quality of Instrument at the most competitive pricing.

SKILL® Instruments offer the Surgeon a heightened sense of Instrument control allowing the Surgeon to greatly reduce the trauma and risk associated with Surgery.

OPERATE WITH SKILL®, OPERATE WITH US.

SKILL® Instruments carry a Lifetime warranty which covers any material defect or faulty manufacturing.

SKILL® Instruments will be repaired or replaced free of charge without compromise to the product in the event of a valid claim.

SKILL® Instruments are to be returned to the authorised distributor for maintenance, any work carried out by an authorised person will void the warranty.

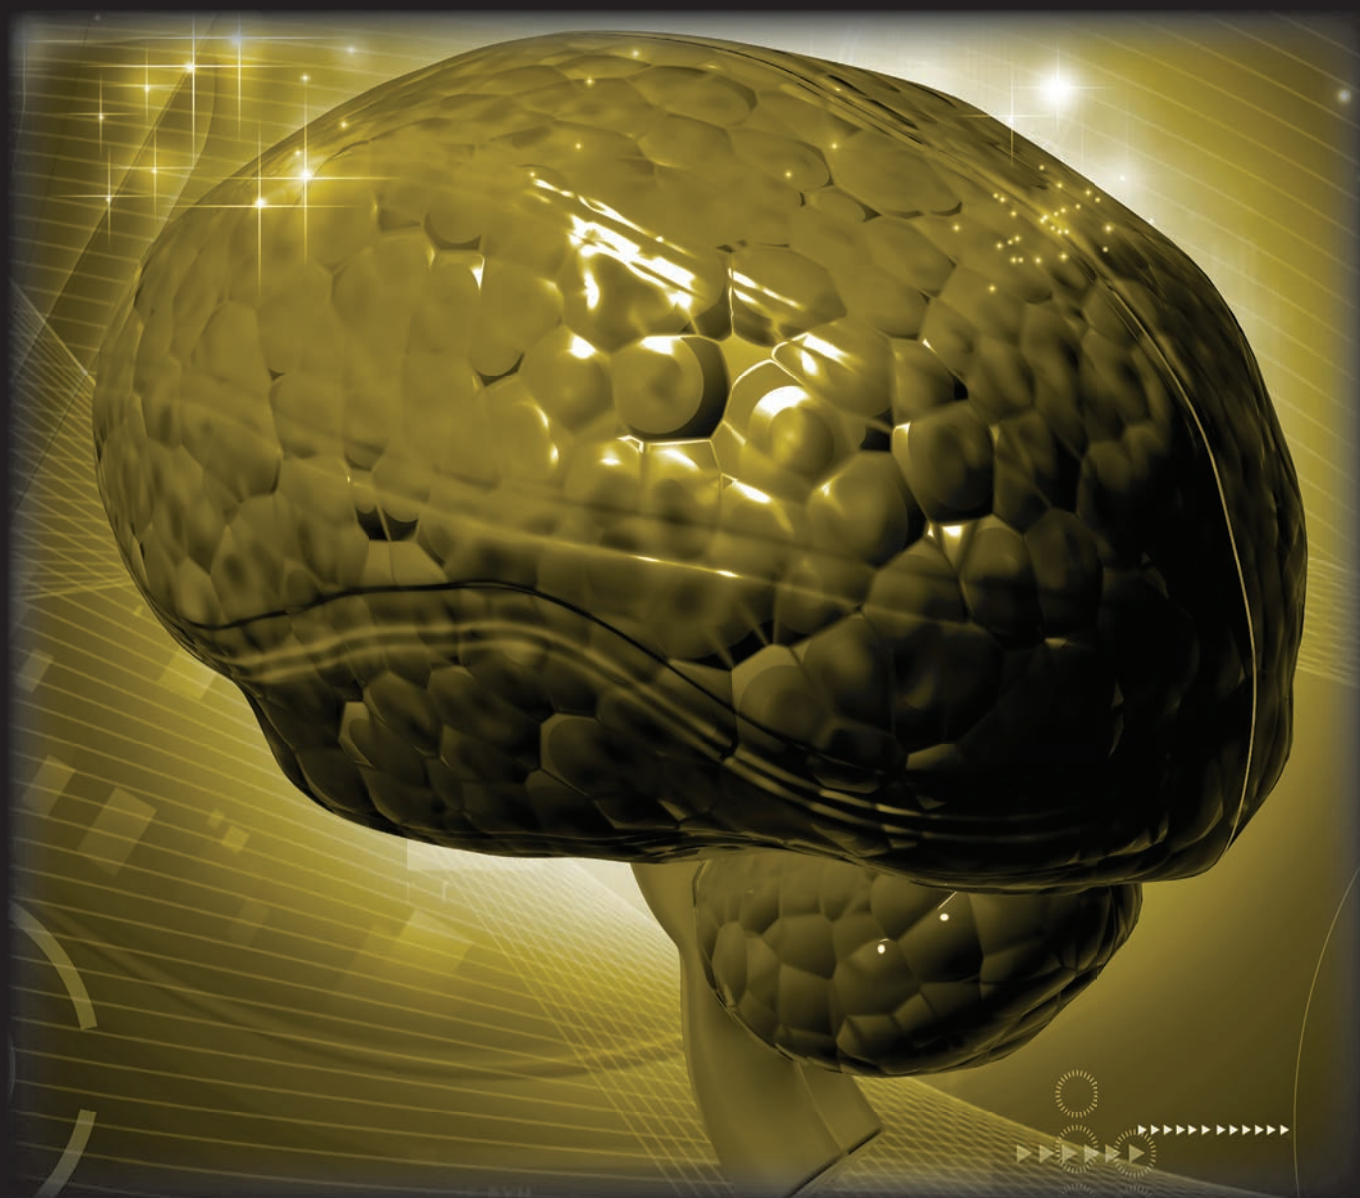

No part of the Catalogue may be copied, forwarded or distributed without the express written consent given by the Manufacturer or its Distributor.

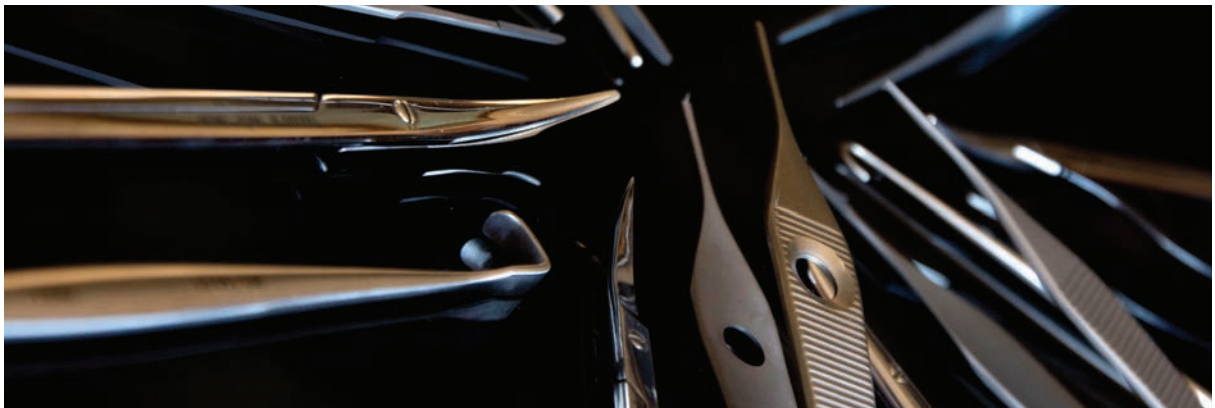

Operate with **SKILL®**

BIPOLAR FORCEPS

Non-Stick Technology

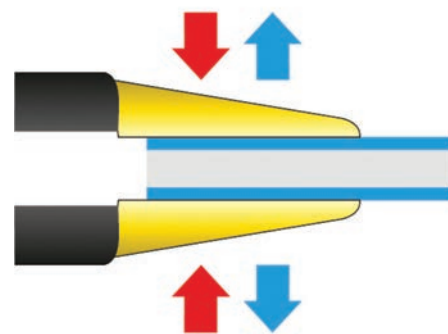

Excellent thermal conductivity, by using 925 sterling silver tips, precludes sticking of coagulated tissue. This eliminates the tedious and time-consuming cleaning of the forceps during surgery and ensures a high precision work without loss of time.

Variations of tips

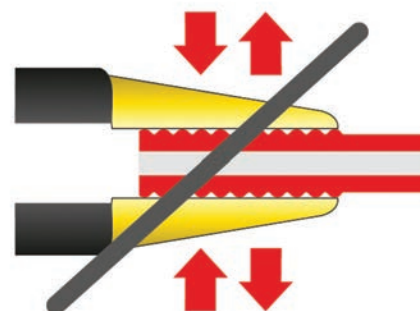

The precisely machined tips allow to work accurately. The Peter Lazic Bipolar Forceps are available in all common tip sizes and three coagulation lengths.

EU Flat or US Pin Connector

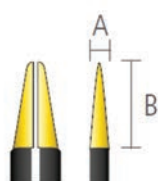

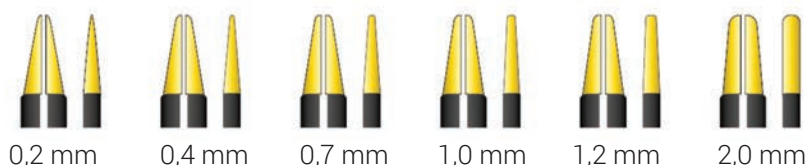

Peter Lazic Bipolar Forceps are available with EU FLAT or US PIN connector.

No sticking, due to optimal heat conduction

Tissue sticks, as the heat cannot be conducted

69.211.2 X

a) 160 mm

A = tip size

B = coagulation lengths

X = US or EU connector

How to order EU FLAT CONNECTOR

69.211.2 0

Please add "0" at the end.

How to order US PIN CONNECTION

69.211.2 1

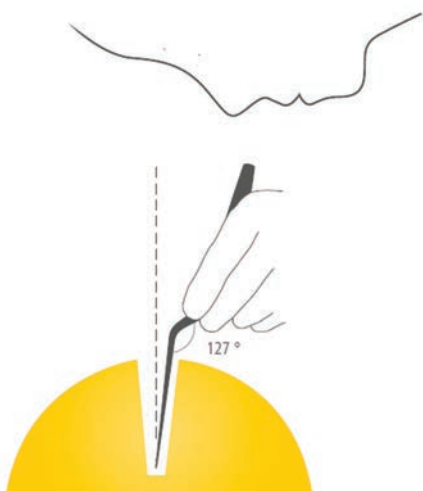

Please add "1" at the end.

The Guiding Pin

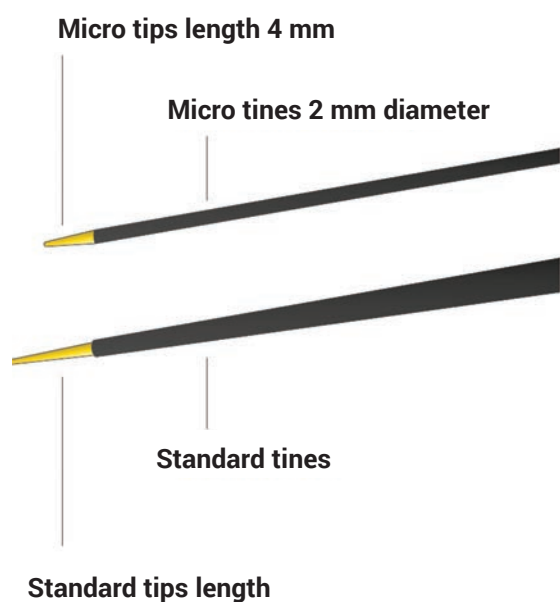

The Guiding Pin prevents the tips from crossing over and spreading and therefore enables a comfortable dissection without tiring.

Ergonomic Bayonet Design

The bayonet design provides the surgeon a clear view. The angle of 127° prevents a visual impairment by the hands. Balanced instruments allow a safe grip position and ensure fatigue-free working.

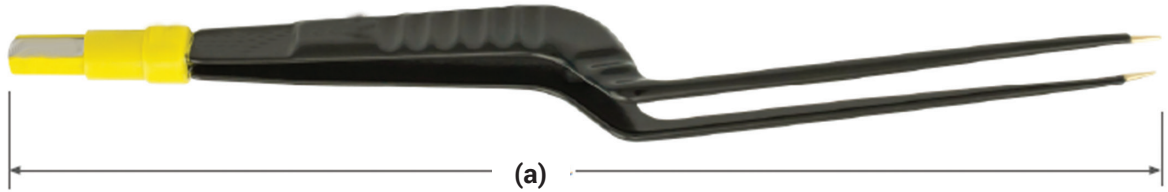

Micro Line

With our Micro Line you are well equipped to perform surgery in areas with limited accessibility. The extra slim profile offers the best possible visibility in deep or difficult to access microsurgical fields. Short coagulation tips ensure optimal control and safety.

RETRACTORS

RETRACTORS

The new SL-set: Spine Retractor and Distraction Set for anterior cervical fusion (ACF)

- Optimal exposure due to use of longitudinal and transverse double hinged retractors.
- Allows unilateral and bilateral retraction in one set.
- Colour-coded blades for ease of use together with coloured depth gauge.
- All instruments are stored in 3 inserts with special Rilsan R coating for the coloured blades to protect instrument surface during transport and sterilization.
- Retractors stainless steel and variety of blades in 5 different designs out of aluminium.
- All components also available separately.

KC-Retractor Set

- For posterior lumbar and thoracic spine surgery.
- Standard Set with KC-Retractor and standard blades in different designs.
- 1 to 5 teeth design, various widths and depths of blades available.
- Optimum assembly, repositioning and stability.
- All instruments available in one tray, securely stored.
(Dimensions: 540 x 253 x 50 mm).

New:

- KC-Lightweight Set with newly designed retractor and connection of blades with additional safeguard.
- Retractor is 25% lighter compared to standard retractor due to new design.
- Blades feature an additional safeguard.

SKILL-Cranial Stabilization Systems

Material

- SKILL-Cranial fixation system made of aluminium / stainless steel.
- Coated SKILL-Cranial fixation system.
- SKILL-Cranial fixation system made of High-Tech polymer for complete X-ray transparency and MRI-compatibility.

Product Design

- The gold standard in head fixation.
- 2 sets available with horseshoe headrest (for adults) or with skull clamp (3-pin-fixation).
- SKILL-Pins in stainless steel, titanium or PEEK.

Description

- As a complete system with all components, Made in Germany.
- Outstanding stability with all necessary flexibility.
- Components made of aluminium for weight reduction or stainless steel for stability.
- Milled components for improved stability.
- Can be combined with Viridis and snake-arm-system.

RETRACTORS

Functional Overview

Can be adapted with two bars per side for more flexibility. Can also be used as a hand rest.

Variants: straight or curved rods in various lengths.

Round, narrow contour of the rods: can be adapted with standards such as Leyla/Viridis.

Navigation adapter connection.

Protection against unintentional release of the locking device.

Four adaptation points available for target devices / navigation adapter connection (N). Further connection options for stereotactic procedures.

Individual labelling is possible here.

Clamping adapter 360° rotatable and tiltable.

Production from full aluminium block for higher stability and smoother pore-free surface.

Operating elements color marked (black/gold).

The newly developed SKILL head stabilization and retraction system has been specially designed to meet the needs of the user.

The basic set is available with a skull clamp or neck support and can be connected to a complete SKILL attachment holding system for the adaptation of accessories (Viridis, Leyla...).

This makes the system movable in all directions and height-adjustable.

Four adaption interfaces for the attachment of target devices as well as further connection possibilities for stereotactic procedures are available.

Everything from a single source.

Made in Germany with the highest quality.

Premium SKILL head holding system with special coating

- The premium version with special coating and additionally with stainless steel components for easier, friction-free installation of the system.
- All components can be disassembled to fit into 2 trays, special inserts for secure storage during cleaning, sterilization and transport.
- The skull pin holder is available in pediatric or adult size thus the standard system can easily be adapted to the correct size.
- Additional protection at the skull clamp and at the base unit against unintentional release of the locking device.

The new SKILL table connection for cranial fixation with skull clamp is placed when using intraoperative magnetic resonance imaging (MRI) or intraoperative X-ray (CT).

- Adaptable to the skull clamp CB1-17-200-40 and horseshoe headrest CB1-17-200-35 via standard interface made of High-Tech plastic thus completely X-ray transparent and MRI-compatible.
- Easily mountable on standard OR tables.
- Table connection directly mountable on Maquet OR tables (screw length: 40 mm).
- Screws with 80 mm are available as an additional option.
- Easily adjustable, tiltable, adaptable in the various desired positions.
- Stable and flexible.

Fixation Systems

An additional product completes the recently introduced SKILL system, the new universal ring-shaped retractor system for the CT/ MRI - SKILL system.

- Easily adaptable to all skull clamps
- Universal attachment ring for snake arms and retractors as well as other accessories.
- C-shaped design, can be used as half ring or full circle and can easily be exchanged
- Angulation possible in various retraction levels
- Made of PEEK and therefore completely radiolucent and MRI-compatible

BH-retractor system for skull clamp, type Halo includes:

KERRISON UPCUTS AND DISC RONGEURS

KERRISON UPCUTS AND DISC RONGEURS

Prime Punch, Clever, Simple and Flexible

Shafts

Shapes

Shafts are available in straight and bent upwards shape and can also be provided in black by using DLC coating. The coating has outstanding mechanical and biocompatible properties. The darkened surface minimizes the glare and grants a high level of scratch and corrosion resistance.

Insert the shafts

The shaft design enables a better view of the operating field during surgery. To insert the shaft slide it back into the handle and match the lines on both parts to position.

1. One handle and 30 different shafts to insert.

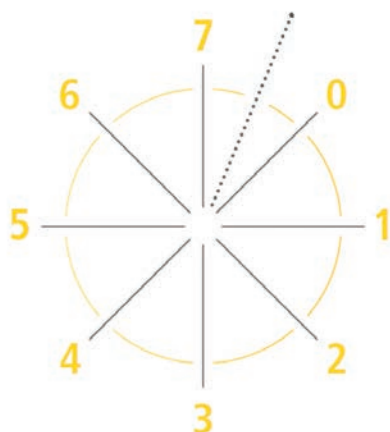

1

Pull serrated
part backwards

2

Rotate shaft
into position

3

Release serrated
part

Flexibility

The Prime Punch gives you all the flexibility you need. Seven different positions between 90°. Left cutting and up cutting can be adjusted with this easily convertible shaft system. The "security stop" between 7 and 0 will prevent unintentional release of the shaft.

Positions

- 0 used for inserting and releasing - in/out
- 1 90° left cutting
- 2 45° left downcutting
- 3 90° down cutting
- 4 45° right downcutting
- 5 90° right cutting
- 6 45° right cutting
- 7 Upcutting

Easy to clean

The Prime Punch is design for the cleaning requirements of today. Once the shaft is pulled out of the handle, unscrew the spring system (A) to disassemble the lower and upper shaft.

By pulling back and upwards on the upper shaft (B) you are able to disassemble shaft into four components:

- 1 Upper shaft
- 2 Lower
- 3 Pulling wire
- 4 Spring

Handle

The small handle accommodates surgeons with small hands while maintaining a large mouth opening of 14mm.

Hintermann Distractor with closed arms

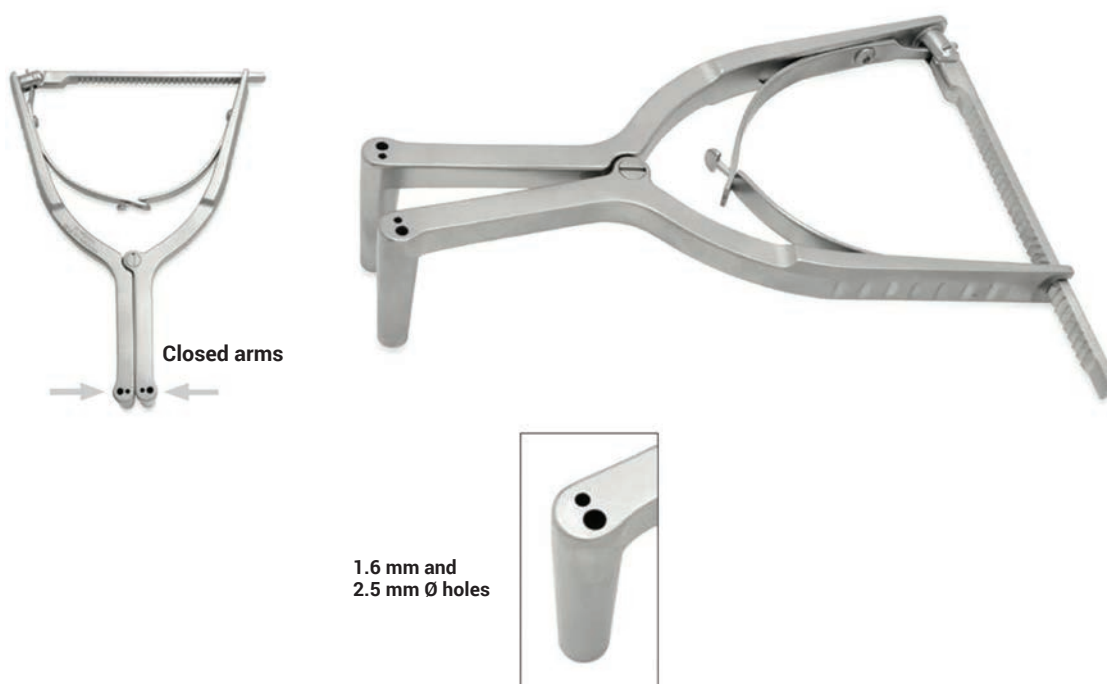

The Hintermann Distractor is used in foot and ankle surgery for bone distraction as an alternative to Lamina spreaders. The instrument can be locked and applies distraction across two K-wires placed on either side of a joint.

Two K-wires (either 1.6 or 2.5mm Ø) are introduced into the correct holes in the spreading arms, and penetrate the bone at appropriate position into each of the two bone fragments to be distracted.

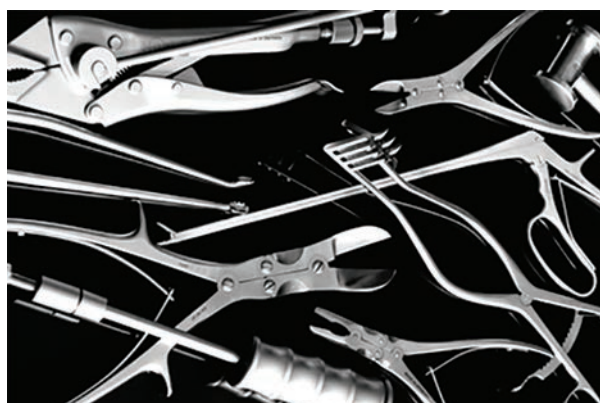

The spreader is then distracted, and locked when the required distance between the two bone fragments is reached.

The Hintermann offers flexible positioning with the advantage of not interfering with the procedure.

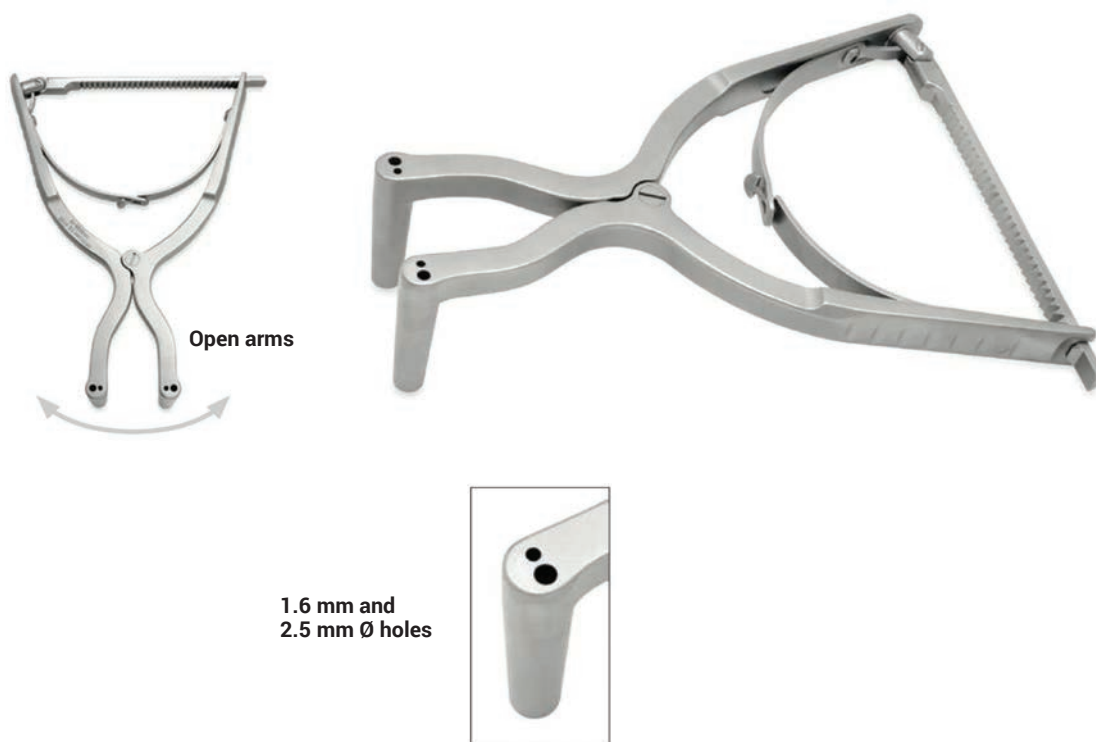

These distractors are available in two different sizes (15 cm or 21 cm), and with closed or outspread arms, allowing them to fit different indications.

Description	Opening	Size	Code
Hintermann Distractor with closed arms	28 mm	15 cm	ED-1615-15

Memory Micro Instruments

1. Micro Working-Ends

- A variety of styles available for different surgical approaches
- Delicate working ends for precise performance

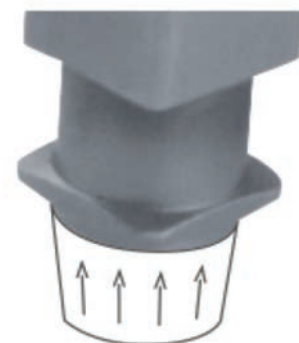

2. Memory Shaft (Nitinol)

- Shapes to coincide with anatomical needs
- Reverts to original shape after sterilization

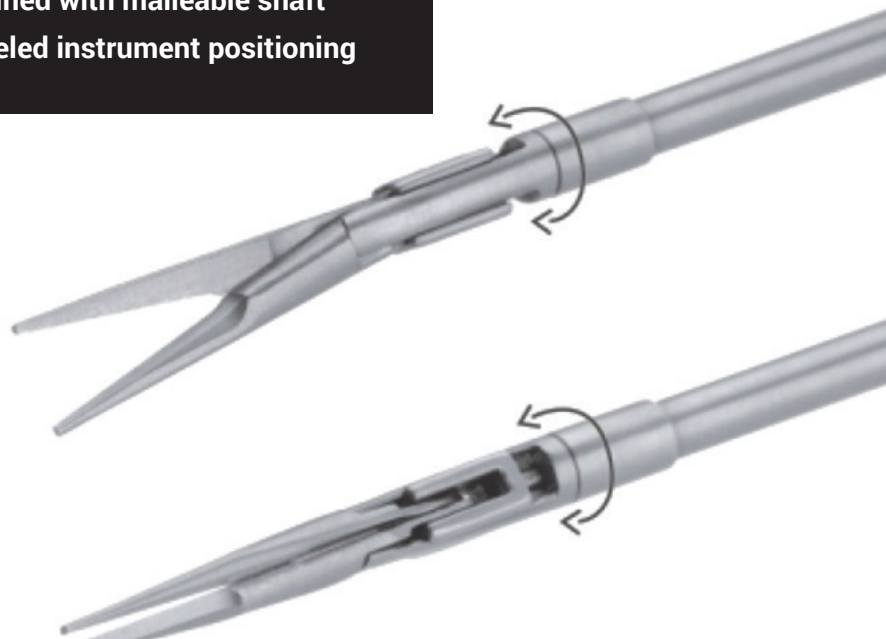

3. Rinsing-Connection/Cleaning

- Built in flushing port for easy and efficient cleaning of internal components

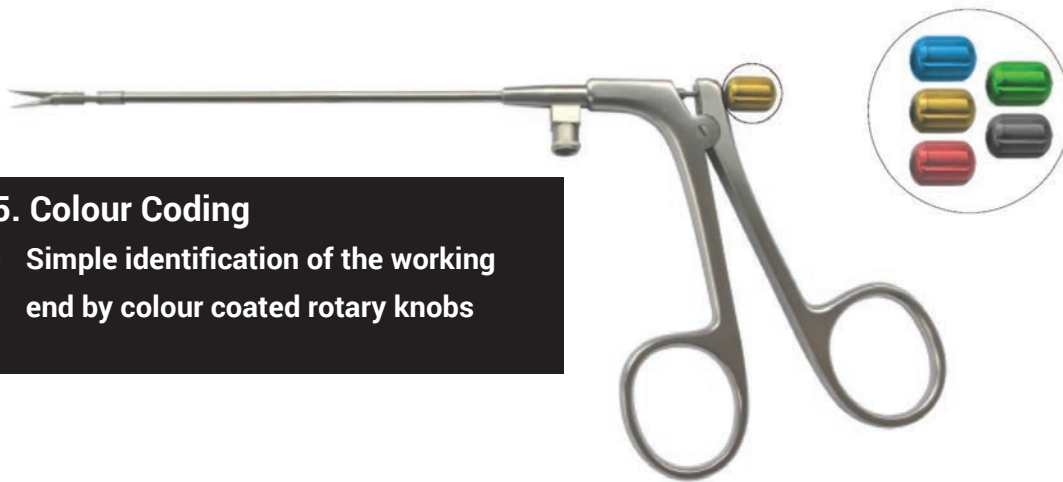

4. 360° Rotatable Working Ends

- Hand controlled wheel ensures exact positioning of the working end
- Rotation combined with malleable shaft offers unparalleled instrument positioning

**5. Colour Coding**

- Simple identification of the working end by colour coated rotary knobs

**6. Ergonomic Handle**

- Low weight, ergonomic shape of the ring handle for a comfortable working feeling

SKILLCUT Arthroscopy Punches and Grasping Forceps

- Our SKILLCUT arthroscopy punches are based on a long-standing mechanical principle of pin less guidance in the axis of movement of the jaw. Main benefit for the user is the working capability in very narrow areas of the joint.
- The precision of the CNC milled jaw parts guarantees a long life, highest possible cutting ability and absolutely protection from corrosion.
- The ergonomically designed handle allows a non-tiring operating across multiple surgical interventions.
- The open shaft accommodates a residue-free treatment and therefore totally safeness in the asepis.
- A professional consultation and an excellent after sales service guarantee you highest satisfaction with this product line.

SKILLCUT Arthroscopy Punches - Handle and Shape Selection

CLASSIC
For Scissors and
Basket Punches

LOCK
For Grasping
Forceps

ROTATABLE
For Selected Scissors
and Basket Punches

ERGO
For Selected Scissors

CIGAR
For Selected Scissors
and Basket Punches

B = Bite Width

W = Tip Width

H = Tip Height

STRAIGHT

The primary style for
direct approach.

Up Biter

25° Upwards Angled
Tip for increased
access Tip to the
posterior meniscus.

Up Swept

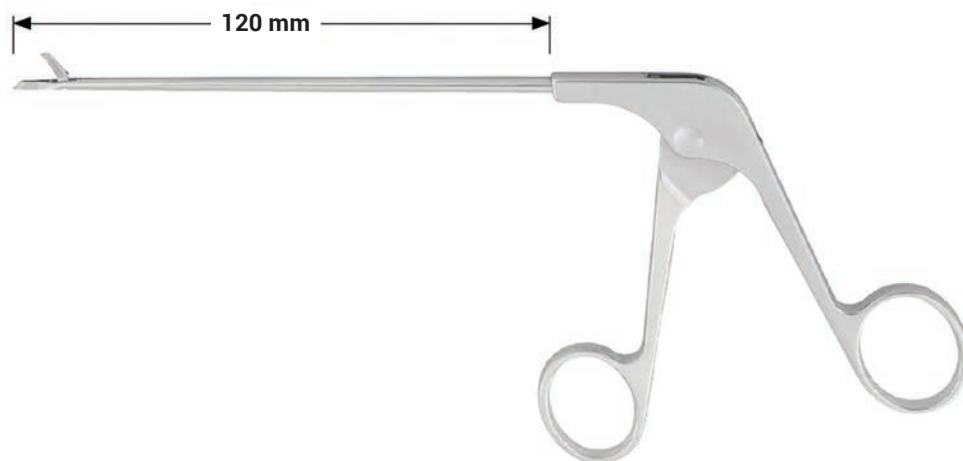

Angled Shaft follows
the contour of the
condyle and keeps
the cutting parallel to
the tibial plateau.

LEFT | RIGHT

Curved to reach the
medial and lateral
meniscus.

SKILLCUT Classic Handle Instruments

Scissors, basket punches and graspers are equipped with our traditional classic handle.

SKILLCUT Side-Lock Handle Instruments

All graspers are equipped with this infinite-position locking-handle design.

SKILLCUT Axial Handle Instruments

Axial handle black available on suture instruments and different colours.

SKILLCUT Axial Handle w/o ratchet Instruments

Axial handle with ratchet available on suture instruments.

SKILLCUT Shoulder-Instruments, Suture Hook

For the area of the shoulder, these instruments were specially manufactured. The low-profile and the highly sharpened tip allows easy passage through tissue in order to retrieve or apply suture. Also the instruments for grasping the engagement is facilitated by the shape of the jaw.

SKILLCUT Shoulder-Instruments, Suture Hook

SKILLCUT Shoulder-Instruments, Suture Hook

SKILLCUT Shoulder-Instruments, Suture Hook

The Suture Cutter is designed to cut suture blindly when visualization of the knot is not possible. It is available in different versions. The closed shape prevents the knot from being cut through. The V-shape allows you to cut sutures in the joint without needing to introduce the suture cutter from above.

SKILLCUT Arthroscopy Shaft Replacements

Bite Width

Tip Width

Straight

Up Biter

Up Swept

Right and Left

The primary style for direct approach.

Angled 1/4 curve at tip for increased access to the posterior meniscus.

Angled shaft follows the contour of the condyle and keeps the cutting surface parallel to the tibial plateau.

Angled to reach the anterior and posterior meniscus.

Duckbill

Description		Bite Width	Tip Width	Acufex Ref#	Code
